

Hardening and wear-resistant agent

S-100

Features and advantages:

Hardening and wear-resistant agent S-100 is mainly used for hardening and wear-resistant black sand grain powder coatings.

1. Improve the wear resistance of powder coating
2. Increase the scratch resistance of the coating surface
3. The screen recoating performance is not affected

Product specification:

appearance	White granular powder
hardness	<0.5dmm
Fusing point	120°C
density	0.96 (g/cc)

Addition amount and use method:

1. In the production process of powder coating, the addition amount of hardening wear-resistant agent D-100 is generally 0.5-2%
2. Add raw materials together during pre-mixing, melt and extrusion

Packing: Paper-plastic composite bag, net weight: 25 kg/bag

Note: The conditions and ratios listed in this manual are for reference only. Before using, please Make appropriate adjustments according to the specific equipment, materials, environment and application
