

Hardening wax

S-520

Features and advantages:

S-520 is mainly used to improve the hardness and wear resistance of powder coatings, so that powder coatings have better dispersion wettability.

1. Help disperse the makeup filler
2. Lubricating propeller, good friction resistance
3. Increase surface scratch resistance
4. Environmental protection tasteless, no black smoke

Product specification:

appearance	White granular powder
density	0.98 (g/cc)
Fusing point	105℃
hardness	<2.0dmm
ingredient	Modified polyethylene homopolymer

Addition amount and use method:

In the production process of powder coatings, the amount of hardening wax added is generally between 0.5-2%

Packing: Paper-plastic composite bag, net weight: 25 kg/bag
