

Environmentally friendly conductive agent

RT-3096

Features and advantages:

RT-3096 is an environmentally friendly conductive agent, with excellent heat resistance, can significantly reduce the resistance of paint and ink, has the effect of preventing electrostatic accumulation and promoting electrostatic rapid discharge, conductive high efficiency, durable, soluble in ethanol and other organic solvents.

Product Specifications:

appearance	Yellow transparent liquid
Effective	100%
Make up	Quaternary amine salt cationic surfactant and non-ionic surfactant complex

Application: Suitable for soft, semi-rigid polyvinyl chloride and butadiene rubber, polyurethane, epoxy resin and coatings, printing ink and other materials

Recommended dosage: 1.5-3% of the total formula (please test the most appropriate dosage before use)

Usage: It can be added at any stage in the production process. If it is added before use, it needs to be stirred with a blender.

Packing: Net weight 25Kg/ barrel.

Storage and precautions:

Keep away from heat source and light source. When the product is below 5 ° C, it may produce gel phenomenon, which needs to be thawed by indirect heating and stirred before use
