

Water resistant additives

RT-3101

Product features and advantages:

RT-3101 is a crosslinking accelerator with modified low substructure and unique functional groups of low molecular interpenetrating network structure. These functional groups are evenly distributed and have unique functions. They can react with the crosslinking functional groups of baking coatings, which can reduce the curing temperature, cure faster and more fully, and significantly improve the water resistance and boiling resistance of the coating film.

Product parameter:

appearance	Colorless or light yellow viscous transparent liquid
Solid content	75+2%
solvent	Isobutanol mixed solvent
PH	6-7

Product application: industrial paint, glass paint, water-based paint

Recommended dosage: 3-5% of the total amount

Usage: Add in the paint mixing stage, need high-speed dispersion, without dilution, can be directly added.

Packing: 25kg/ barrel

Storage strip: Stored in a cool and dry place at 2-35°C, away from the sun and away from the fire.
