

Solid granular dispersant

RD-9105

Features and advantages:

RD-9105 is a kind of polymer dispersant, which is widely used in UV offset printing ink and coating system. It has excellent grinding and dispersing effect on carbon black, organic pigment and matting powder. Especially for various packaging ink systems dispersing high surface carbon black and organic pigments, it has a very good viscosity reduction

effect. Product specification:

appearance	Light yellow particle
Specific gravity	1.09g/cm ³
Effective portion	100%

Scope of application:

1. Various UV packaging ink systems disperse grinding carbon black and organic pigments, matting powder;
2. Disperse and grind carbon black and organic pigments in industrial paint, wood paint, plastic paint and other systems.

Recommended dosage:

Organic pigment	7-15%
Low surface carbon black	10-20%
High surface carbon black	40-80%

Usage:

First dissolve RD-9105 in the mixture of grinding base material, and then add pigment for grinding.

Packing: 25KG non-recycled blue plastic drum. The product is not completely used before, and the lid should be tightened after use.

Storage: Keep away from fire, light source and away from light.

Note: Please evaluate carefully before use, suitable for matte furniture paint, can also be applied to bright light.
