

Water and oil general substrate wetting agent

RK-8207

Features and advantages:

RK-8207 is a special polymer derivative, water - based and oily versatile additive.

1. Moisten the substrate to improve the adhesion of the coating film to the substrate;
- 2, dye dispersion color separation (a variety of dyes when mixed) to improve the brilliance, covering power;
- 3, pigment dispersion add: shorten the dispersion time, reduce the consistency of color paste;
- 4, solvent-based thermoplastic acrylic coating can improve the adhesion (to plastic) leveling;
- 5, leveling agent: in water-based coating or glue, can improve the diffusion speed and leveling to eliminate the loss of oil stains on the surface;
- 6, does not affect the recoating, adhesion of the substrate;

Product specifications:

| | |
|----------------------|---|
| appearance | Colorless to yellowish transparent liquid |
| Chemical composition | Polymer derivative |

Application:

Alkyd/acrylic/epoxy/polyester/photocurable/isowaterborne coating systems

Recommended dosage: in the form of supply for the total formula:
0.05-0.5%

Usage: thin first and then directly into the finished paint to disperse evenly.

Packing: 25KG/ drum.

Storage:

1.) Dumping method is recommended when using, do not use extraction method, in order to avoid external secondary pollution

2.) After use, please seal the lid of the barrel and clean the dirty part to prevent moisture/gas/water/fire. D security
